surface. 66.4×10^6 m (2) Even very very far from earth, its gravitational force is never actually zero, but it does decrease rapidly and forces from other more nearby objects would overwhelm the grav force from earth.

Chapter 9 (Gravity)

Chapter 9 Earth's Interior 9.3 Earth's Magnetic Field Heat is also being transferred from the solid inner core to the liquid outer core, and this leads to convection of the liquid iron of the outer core. Because iron is a metal and conducts electricity (even when molten), its motion generates a magnetic field.

Earth Science Study Guides - tclauset.org

There are three main forces that drive deformation within the Earth. These forces create stress, and they act to change the shape and/or volume of a material. The following diagrams show the three main types of stress: compressional, tensional, and shear.

Forces in the Earth

Ch 9 Think & Explain Answers: No, the centripetal force never does any work on a rotating object, since the centripetal force points toward the center of the circle, and the velocity of the object is tangent to the circle, the direction of the force is perpendicular to the direction of the object's motion - work done = 0.
