### The One Fatal Design Flaw With Ford's 3.5L & 3.7L Duratec ...

In its early years the engine was known to have leaking head gaskets. The normal heating and cooling of the engine block would cause the gaskets to fail, which would in turn cause coolant to be sucked into the combustion chambers. This condition would cause severe engine failure if it was not caught immediately.

### Ford 3.0L Engine Problems | It Still Runs

coil failure is a problem (big problem if it goes badly as it fries the ECU too which blows future coils till its reconned/replaced) HT leads generally fail due to being removed from the engine badly when changing the plugs (easier to grab the wire that the big head of the lead & thus causes damage)

There are absolutly NO issues with the Duratec BLOCK that is in a Mazda 6. "Anymore" and "you hope". The early Duratec engines suffered from crank bearing issues IIRC which required rebuilding but they've been reliable "since 1999".

### Discuss the Mazda 6s Ford Duratec 3.0L engine | Accord V6 ...

The 2.5L is a good engine although its getting long in tooth, but a work horse for sure. Its also port injected (wet intake valve) not direct injected (dry intake valve) like the ecoboost engines so the carbon build-up one the back of the intake valve won't be an issue as the fuel injected in the intake port tends to keep the backside of intake valve cleaned off.
