the diversity of cellular life Flashcards and Study Sets ...

From its simple beginnings, life has spread to every corner of the globe, penetrating deep into the earth and far beneath the surface of the seas. The diversity of life is so great that you might have to remind yourself that all living things are composed of cells, use the same basic chemistry, follow the same genetic code, and even contain the same kinds of organelles. This does not mean that all living things are the same.
